

DOHERTY THRESHOLD (UX LAW)

Improving User Experience through Fast Response Time

What is the Doherty Threshold?

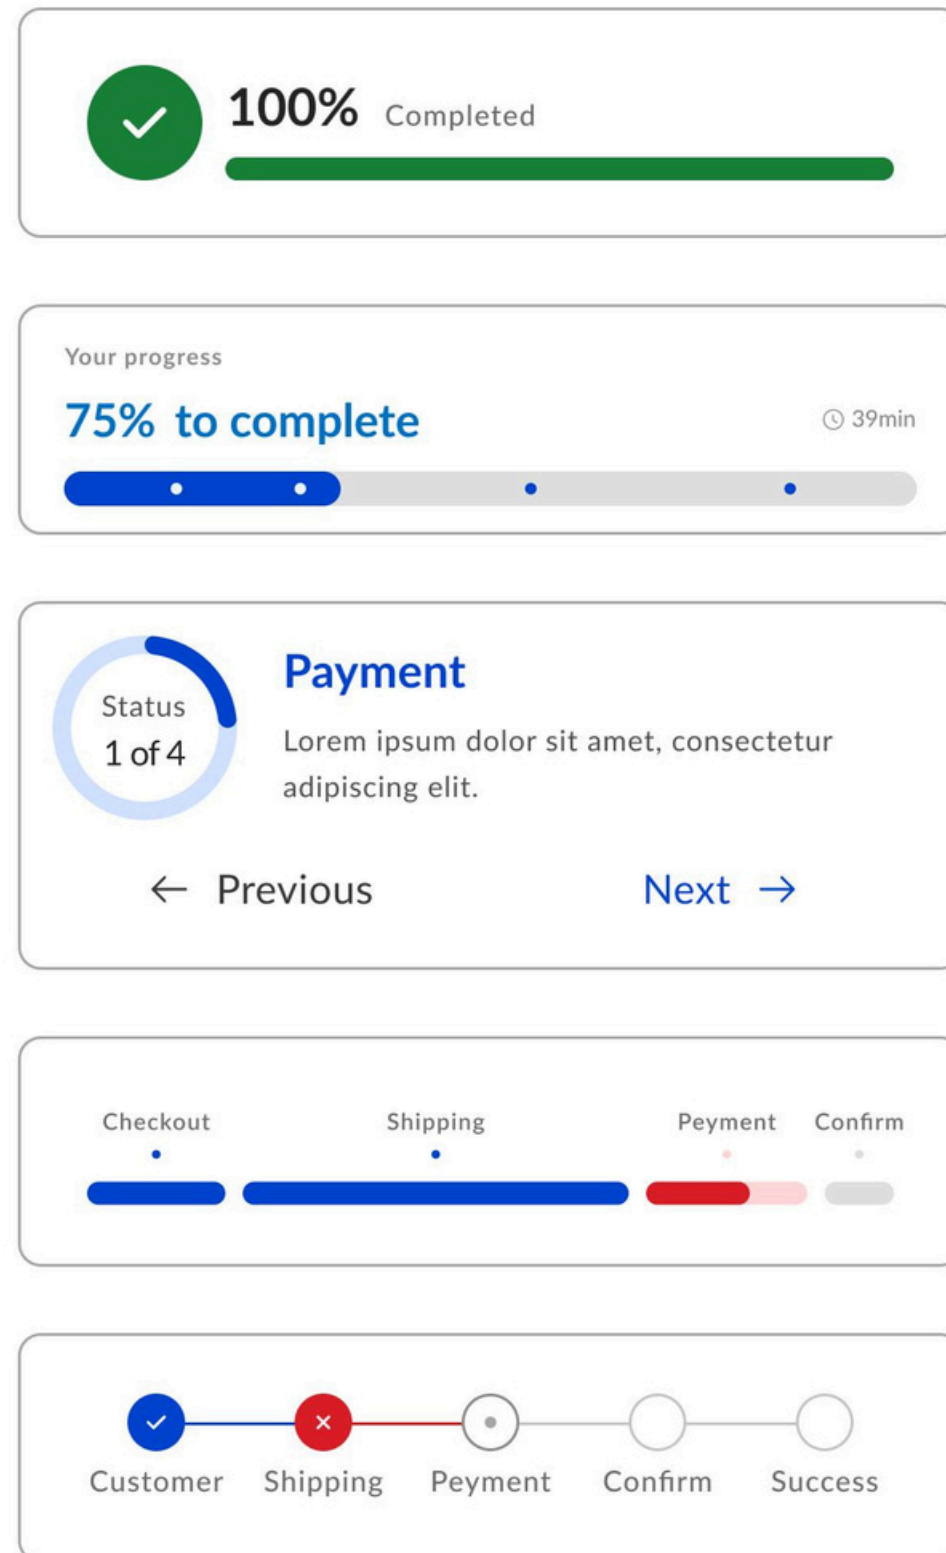

- It is a UX principle about system response time
- If a system responds in less than 400 milliseconds, users feel smooth interaction
- Faster response = better productivity and engagement

“USERS SHOULD NEVER FEEL LIKE THEY ARE WAITING.”

- **Example: Food Delivery App** 🍔
- **Opening a food delivery app**
- **If restaurants load instantly → user continues browsing**
- **If it takes more than 2–3 seconds → user closes the app**

- **“Fast response keeps users engaged, slow response makes them leave.”**

CONCLUSION

- Fast response = better experience
- Slow response = user frustration

***SPEED DIRECTLY IMPACTS USER
SATISFACTION***

THANK YOU
